

Retrieve

GET api/v1/specification/{id}

MongoDB and
Elastic Retriever

Document

```
graph LR; A[GET api/v1/specification/{id}] --> B[MongoDB and Elastic Retriever]; B --> C[Document]
```

The diagram illustrates the retrieval process. It begins with a GET request to the API endpoint `api/v1/specification/{id}`. This request is processed by a component labeled 'MongoDB and Elastic Retriever', which is contained within a larger rectangular box. An arrow points from this component to a document icon, which is a rectangle with a wavy bottom edge, labeled 'Document'.
